Delay from submission to publication, AEA journals

Articles published 2016−2024 (years depend on the journal; see delay_pubyears.csv). Vertical line: median.

Submission: year and manuscript number from the DOI (e.g., 10.1257/aer.20151234). Within a submission year, the quartiles of the manuscript numbers of all published articles define the submission quarter (dated at its middle). Only submission years with at least 80% of their published articles observed with such a DOI are used, and only publication years with at least 90% of articles from those submission years. Publication: month of the print issue. Delays fall on a grid of 3 months for the AEJs (quarterly issues), so the median shift is a multiple of 3 months.
Points: articles (jittered vertically). Lines: kernel density (bandwidth 4 months). Excluded: AEA P&P, JEL, JEP (no submission−based numbering).
