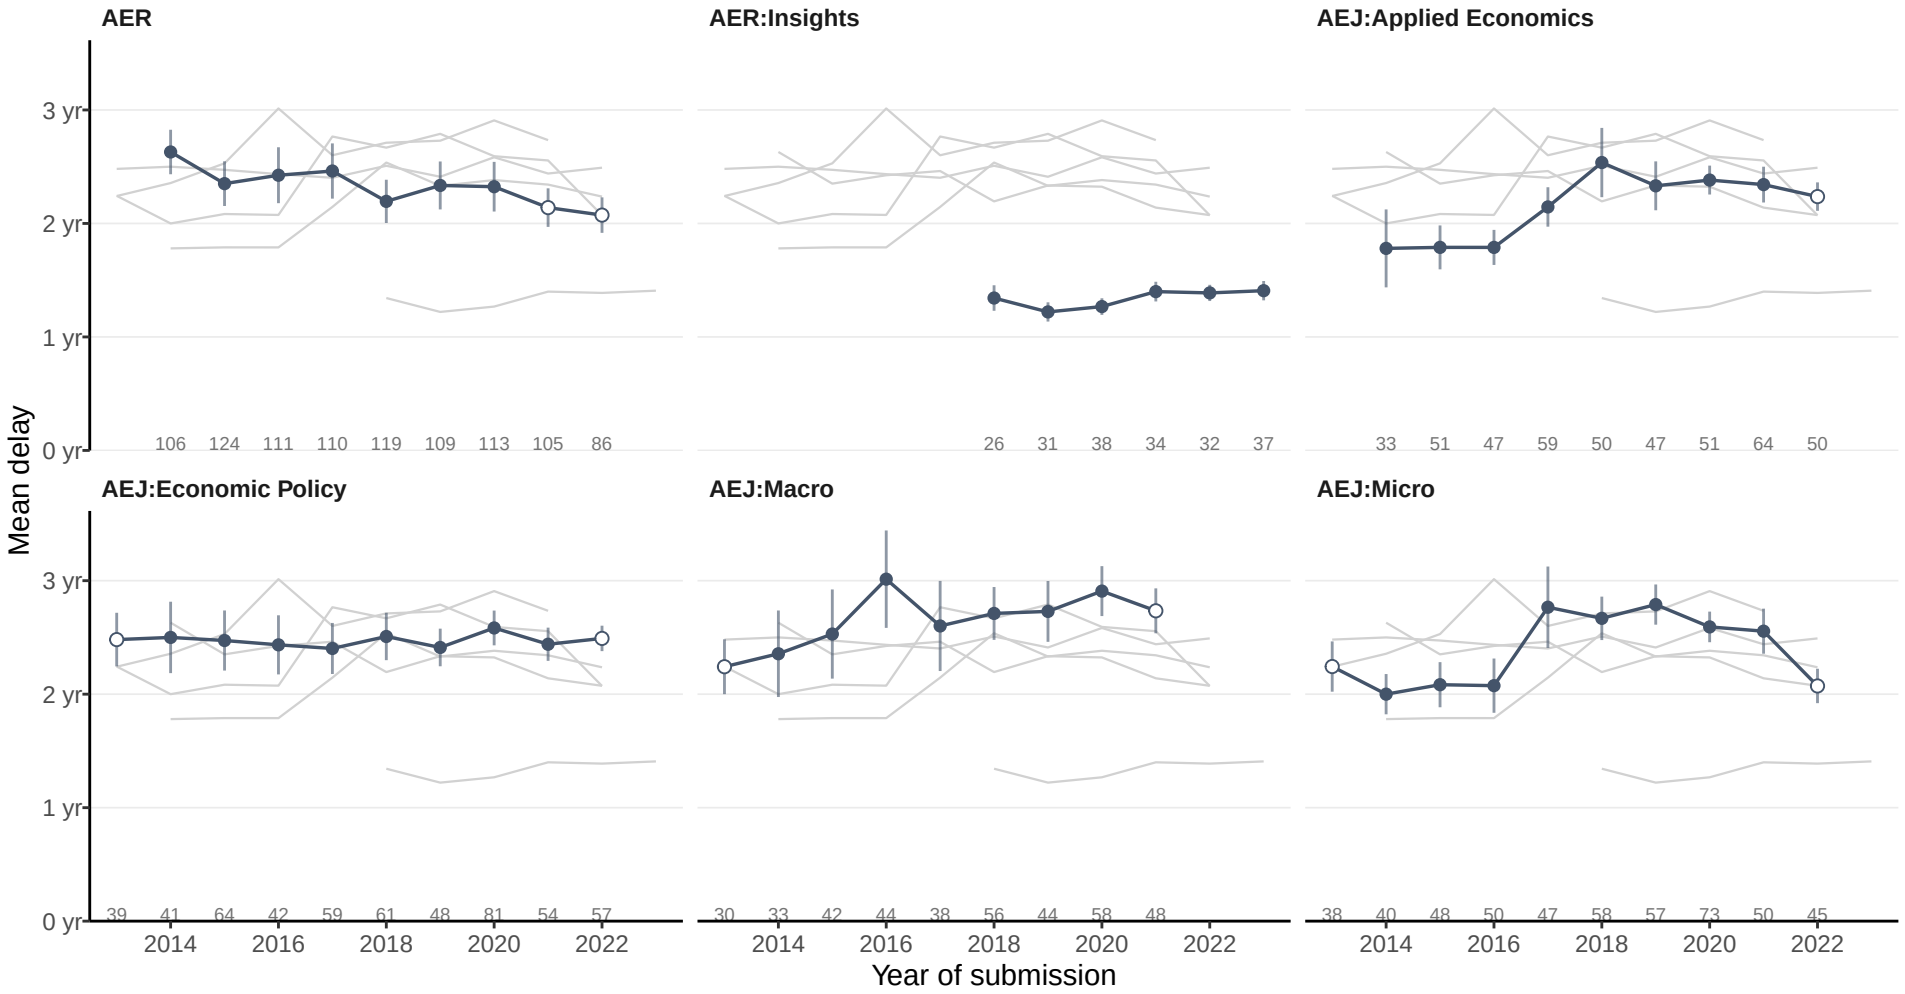
Mean delay from submission to publication, by year of submission

Mean and 95% CI; numbers: articles. Grey: other journals. Hollow: submission years with less than 95% of their published articles observed; recent years miss their slowest papers, so their means are too low.



Papers accepted after mid−2019 were reviewed by the Data Editor; given the delays, that includes many papers submitted from about 2016 on. Submission: year and manuscript number from the DOI (e.g., 10.1257/aer.20151234). Within a submission year, the quartiles of the manuscript numbers of all published articles define the submission quarter (dated at its middle). Only submission years with at least 80% of their published articles observed with such a DOI are used, and only publication years with at least 90% of articles from those submission years. Publication: month of the print issue. Excluded: AEA P&P, JEL, JEP (no submission−based numbering).
